

## Western Electronics Announces Conformal Coating Service for Printed-Circuit-Board Assemblies

Meridian, Idaho (PRWEB) February 11, 2008 - Western Electronics

([www.westernelectronics.com](http://www.westernelectronics.com)) announced that it has introduced conformal coating capabilities to complement its printed-circuit-board assembly capabilities and value-added solution offerings. Western Electronics is a full service contract electronics manufacturer providing design-for-manufacturability/testability, procurement/supply-chain management, printed-circuit-board assembly, wire-harness and cable assembly, box-build and upper level assembly, logistics and end-order-fulfillment, and now conformal coating services.

Western Electronics recognized a need for conformal coat capability to support several existing customers primarily in the automotive and industrial market segments, as well as to offer an additional service to its target customers. Western Electronics operates ISO 9001 certified facilities in Idaho and Colorado, and will offer conformal coat capability out of its Westminster, Colorado operation.

The conformal coat equipment and process were internally qualified in January with customer qualification completed in February, and is now being introduced on a general availability basis to the market. Western Electronics will use acrylic resin materials for current customer conformal coat requirements, and has the additional capability to apply urethane and silicone resins.

“In response to our customer’s requirements, we have introduced conformal coat capability, and appreciate their partnering with Western Electronics on the timely qualification of this process,” said Rob Subia, President and CEO of Western Electronics. “We believe this additional service will complement our existing value-added service offering, and broadens our capability to support existing and new customers.”

Western Electronics is a recognized leading Regional Contract Electronics Manufacturing Services Company (CEMS) providing manufacturing service solutions for original equipment manufacturers (OEMs), primarily in the western portion of North America. Our market focus is small to medium size OEM companies, who require a high level of quality, delivery, flexibility, and responsiveness in the outsourcing of product sub-assemblies or product assembly.
